

EN
DAMACRYL 910
Poly (glycolide-co-lactide) / Polyglactin-910
Coated & Braided
Synthetic absorbable sterile surgical suture

DESCRIPTION
DAMACRYL 910 suture is synthetic absorbable sterile surgical suture. It is composed of copolymer prepared and synthesized from 90% glycolide and 10% L-lactide (derived from glycolic and lactic acids). These sutures are braided, dyed (violet) or undyed and coated with polycaprolactone and calcium stearate. **DAMACRYL 910** suture is non-antigenic, non-pyrogenic and elicits only a mild tissue reaction during the absorption process, and is completely absorbed in 54-70 days. The in vitro retention of strength is 65% in two weeks. **DAMACRYL 910** meets all requirements for absorbable synthetic sutures defined by the European Pharmacopoeia, EC Medical Device Regulation 2017/745/AT, and US Pharmacopoeia. Safety and clinical performance are detailed in GMD.SSCP.03

INDICATIONS
DAMACRYL 910 is indicated only for use in soft tissue (including ophthalmic surgery, gastrointestinal, obstetric and gynecological and urological surgery) approximation where mid term wound support (2-3 weeks) is required. **DAMACRYL 910** is not indicated for use in cardiovascular and neurological tissues.

CONTRAINDICATIONS
DAMACRYL 910 suture, being absorbable, should not be used where extended approximation of tissue is required.

WARNINGS
Users should be familiar with surgical procedures and techniques involving absorbable sutures before employing **DAMACRYL 910** suture for wound closure, as risk of wound dehiscence may vary with the site of application and the suture material used. Users should consider the in vivo performance when selecting a suture. The use of this suture may be inappropriate in elderly, malnourished, debilitated patients, or in patients suffering from conditions which may delay wound healing. The use of supplemental non absorbable sutures should be considered by the surgeon in the closure of the sites which may undergo expansion, stretching or distention, or which may require additional support. As with any foreign body, prolonged contact of any suture with salt solutions, such as those found in the urinary or biliary tracts may result in calculus formation. As an absorbable suture, **DAMACRYL 910** suture may act transiently as a foreign body. Acceptable surgical practice should be followed for the management of contaminated or infected wounds. Discard opened packages and unused sutures. Do not re-use. Do not re-sterilize.

STERILITY
DAMACRYL 910 sutures are sterilized by ethylene oxide. Sterility is preserved only when opened under sterile conditions. Do not re-sterilize. Do not use if package is opened or damaged. Discard opened unused sutures.

STORAGE
Keep away from moisture and direct heat. Recommended storage condition is between 5-25°C. Don't use after expiry date.

TR
DAMACRYL 910
Poly (glycolide-co-lactide) Polyglactin-910
Kaplamalı & Örgülü
Sentetik emilebilir steril sütür
Boyalı (Mor) ya da Boyasız

TANIM
DAMACRYL 910 sentetik, steril, emilebilir cerrahi ameliyat ipliğidir. %90 glisikolid ve %10 L-laktid (glisolik ve laktik asitlerden üretilir) birleşiminden oluşur. Örgülü ve boyalı ya da boyasız sütürleri polikaprolakton ve kalsiyum sitrat ile kaplanmıştır. **DAMACRYL 910** antijen ve protein değildir ve emilim sırasında sadece hafif doku reaksiyonu ortaya çıkar ve yaşayan bir organizmaya yerleştirildiğinde organizma tarafından 54-70 gün içinde tamamen emilir. In vitro ortamda ilk 2 hafta içerisinde mukavemeti %65 oranında kurtar. **DAMACRYL 910** Avrupa Farmakopesi, Avrupa 2017/745/AT Tıbbi Cihazlar Regülasyonu ve Amerika Birleşik Devletleri Farmakopesi'nde emilebilir sentetik sütürlerin içi tanımlanmış gerekliliklerin tümünü karşılar. Güvenlik ve klinik performans özeti GMD.SSCP.03 dokümanında verilmektedir.

ENDİKASYONLARI
DAMACRYL 910, yalnızca orta vadede yara desteğinin (2-3 hafta) gerektirdiği olgulara (oftalmik cerrahi, gastrointestinal, obstetrik ve jinekolojik ve ürolojik cerrahi dahil) yaklaşımlarına işlemlerinde kullanılır. **DAMACRYL 910**, kardiyovasküler ve nörolojik dokularla kullanılm içi endike değildir.

KONTRAENDİKASYONLARI
DAMACRYL 910 emilebilir sütür olduğundan, uzun süreli doku yaklaşımları gereken durumlarda kullanılmamalıdır.

UYARILAR
Uygulanan bölge ve sütür materyaline göre yara açılma riski değişmektedir. Kullanıcılar: yara kapama için **DAMACRYL 910** sütür uygulamaklarındandır cerrahi prosedürleri ve teknikleri iyi bilmelidir. Kullanıcılar sütürleri seçerken in vivo performans dikkate almalıdır. Yaşlı, bünyesi zayıf hastalarda veya yara iyileşmesinde gecikme sorunu yaşayan hastalarda bu sütürün kullanımı uygun olmayabilir. Her yabanc cisim gibi, cerrahi iplik de idrar ve safra sistemindeki tüdü solüsyonlarla uzun süre temas halinde olduğunda böbrek/safra taşı oluşumu, 7 günden daha uzun kalması gereken cilt sütürlerinin lokal tahrişe sebep olması, zayıf kan durgunluğu dolaklarda cerrahi ameliyat ipliğinin çıkması veya emilim gecikmesi olabilir. Kırılmış iğneler ameliyat süresinin uzamasına veya ilave ameliyatlara, kalınlar yabanc cisim komplikasyonlarına sebep olabilir. Kontamine olmuş cerrahi iğnelerin yanlışlıkla batması kan yolu ile patojenlerin yayılmasına sebep olabilir.

STERİLİTE
DAMACRYL 910 sütürleri etilen oksit ile sterilize edilmiştir. Steril ortamda açıldığı takdirde ürünü steril halini korumaktadırlar. Tekrar sterilize edilmmez. Paket açtıktan sonra zarar görmüş ise kullanılmayın. Poşetleri veya artan iplikleri atın.

DEPOLAMA
Ürün kuru ve temiz olarak saklanmalıdır. 5-25°C de depolanmayn ve direkt güneş ışığından ve nemden uzak tutunuz. Kullanım ömrü bitmiş ürünleri kullanmayın.

ÖNEMLER
DAMACRYL 910 ve diğer cerrahi iplik materyalleri kullanımı sırasında ipliğe zarar verilmemesine dikkat edilmelidir. Forpses veya iğne tutucular gibi cerrahi aletlerin kullanılması ezilme veya kırılma hasarlarından özellikle kaçınılmalıdır. Her cerrahi iplik materyalesinde olduğu gibi, cerrahi koşullar ve cerrah tecrübesine bağlı olarak, yeterli düğüm emniyeti için kabul edilen cerrah tekniklere uygun düz ve kare düğümleri ile ek düğümler gerekebilir. Kullanıcılar cerrahi iğneleri kullanırken yanlışlıkla iğne batmalarını önlemek için tedbirli olmalıdır. 7 günden daha uzun kalması gereken cilt sütürleri lokal tahrişe sebep olabilir ve belirtire göre makasla kesilmeli veya çıkarılmalıdır. Zayıf kan durgunluğu dolaklarda cerrahi ameliyat ipliğinin çıkması veya emilim gecikmesi olabilir. Kırılmış iğneler ameliyat süresinin uzamasına veya ilave ameliyatlara, kalınlar yabanc cisim komplikasyonlarına sebep olabilir. Kontamine olmuş cerrahi iğnelerin yanlışlıkla batması kan yolu ile patojenlerin yayılmasına sebep olabilir.

YAN ETKİLER
DAMACRYL 910 kullanımı ile ilgili yan etkiler arasında yaraların açılması, kapama bölgesinde genişleme, gerilme veya şişme olduğunda yeteri yara desteği eksikliği, idrar veya safra sistemindeki tüdü solüsyonlarla uzun süre temas halinde olduğunda böbrek/safra taşı oluşumu, 7 günden daha uzun kalması gereken cilt sütürlerinin lokal tahrişe sebep olması, zayıf kan durgunluğu dolaklarda cerrahi ameliyat ipliğinin çıkması veya emilim gecikmesi olabilir. Kırılmış iğneler ameliyat süresinin uzamasına veya ilave ameliyatlara, kalınlar yabanc cisim komplikasyonlarına sebep olabilir. Kontamine olmuş cerrahi iğnelerin yanlışlıkla batması kan yolu ile patojenlerin yayılmasına sebep olabilir.

CONTRAINDICATIONS
DAMACRYL 910 suture, being absorbable, should not be used where extended approximation of tissue is required.

WARNINGS
Users should be familiar with surgical procedures and techniques involving absorbable sutures before employing **DAMACRYL 910** suture for wound closure, as risk of wound dehiscence may vary with the site of application and the suture material used. Users should consider the in vivo performance when selecting a suture. The use of this suture may be inappropriate in elderly, malnourished, debilitated patients, or in patients suffering from conditions which may delay wound healing. Discard opened packages and unused sutures. Do not re-use. Do not re-sterilize.

STERILITY
DAMACRYL 910 sutures are sterilized by ethylene oxide. Sterility is preserved only when opened under sterile conditions. Do not re-sterilize. Do not use if package is opened or damaged. Discard opened unused sutures.

STORAGE
Keep away from moisture and direct heat. Recommended storage condition is between 5-25°C. Don't use after expiry date.

RO
DAMACRYL 910
Pol (glicolid-co-lactid) / Poliglicatină-910
Acoperit & împletit
Fir chirurgical sintetic, absorabil & steril

DESCRIERE
Firul chirurgical **DAMACRYL 910** este un fir sintetic, absorabil & steril. Este compus dintr-un copolimer preparat & sintetizat din 90% glicolid & 10% L-lactid (derivati din acizii glicolic & lactic). Aceste fire sunt împletite, colorate (violet) sau necolorate & acoperite cu policaprolactonă & stearat de calciu. **DAMACRYL 910** este neantigenic, nepirogenic & provoacă doar o reacție tisulară ușoară în timpul procesului de absorbție. Se absoarbe complet în 54-70 de zile. În vitro, își păstrează 65% din rezistență inițială timp de două săptămâni. **DAMACRYL 910** respectă toate cerințele pentru firele chirurgicale sintetice absorbabile, definite de Farmacopeea Europeană, Regulamentul UE privind Dispozițiunile Medicale 2017/745/AT & Farmacopeea Statelor Unite. Siguranța & performanța clinică sunt detaliate în documentul GMD.SSCP.03.

INDICAȚII
DAMACRYL 910 este indicat pentru utilizare în țesuturi moi (inclusiv chirurgie oftalmologică, gastrointestinală, obstetrică, ginecologică & urologică), în cazurile care necesită o susținere medie a plăgii (2-3 săptămâni). **DAMACRYL 910** nu este indicat pentru utilizare în țesuturile cardiovasculare sau neurologice.

CONTRAINDICAȚII
Fiind un fir absorabil, **DAMACRYL 910** nu trebuie utilizat acolo unde este necesară o aproximare tisulară de lungă durată.

AVERTISMENTE
Utilizatorii trebuie să fie familiarizați cu procedurile & tehnicile chirurgicale care implică fire absorbabile înainte de a folosi **DAMACRYL 910** pentru închiderea plăgilor, deoarece riscul de dehiscentă a plăgii poate varia în funcție de locul aplicării & de materialul de sutură folosit. La selectarea unui fir, trebuie luată în considerare performanța în vivo. Utilizarea acestuia fir poate fi inadecvată la pacienții vârstnici, malnutriți, debilitați sau la cei care suferă de afecțiuni ce pot întârzia vindecarea rănilor. Chirurgul ar trebui să ia în considerare utilizarea unor fire suplimentare neabsorbabile pentru închiderea zonelor care pot fi supuse expansiunii, întinderii sau distensiei, sau care pot necesita suport suplimentar. Ca orice corp străin, contactul prelungit al oricărui fir cu soluții saline, cum ar fi cele din tracturile urinare sau biliare, poate duce la formarea de calculi. Fiind un fir absorabil, **DAMACRYL 910** poate acționa temporar ca un corp străin. Trebuie urmate practicile chirurgicale core-spunzătoare pentru gestionarea plăgilor contaminate sau infectate. Aruncați pachetele deschise & firele neutilizate. Nu reutilizați. Nu resterilizați.

STERILITATE
Firele **DAMACRYL 910** sunt sterilizate cu oxid de etilenă. Sterilitatea este menținută numai dacă pachetul este deschis în condiții sterile. Nu resterilizați. Nu utilizați dacă ambalajul este deschis sau deteriorat. Aruncați firele deschise & neutilizate.

DEPOZITARE
Păstrați departe de umiditate & căldură directă. Condițiile recomandate de depozitare sunt între 5-25 °C. Nu utilizați după data expirării.

PRECAUȚII
Při manipulaci acestui sau a oricărui alt material de sutură, trebuie acordată atenție pentru a evita deteriorarea. Evitați comprimarea sau deformarea produsului prin utilizarea instrumentelor chirurgicale, cum ar fi pensetele sau portacale. Firele **DAMACRYL 910**, tratate pentru a îmbunătăți caracteristicile de manipulare, necesită tehnica chirurgicală standard de noduri plate & pătrate, cu bucle suplimentare, în funcție de circumstanțele chirurgicale & experiența chirurgului. Firele cutanate care trebuie să rămână în poziție mai mult de 7 zile pot cauza iritații locale & trebuie tăiate sau îndepărtate conform indicațiilor. În anumite cazuri, în special în chirurgia ortopedică, imobilizarea articulațiilor cu suport extern poate fi aplicată la discreția chirurgului. Trebuie acordată atenție utilizării firelor absorbabile în țesuturile cu vascularizație slabă, deoarece pot apărea extruzii de fir & întârzierea absorbției. Pentru a evita deteriorarea vârfurilor și a zonelor de serizare ale acelor, apucați acul la o distanță de o treime (1/3) până la jumătate (1/2) între capătul serizat & vârf. Remodelarea acelor poate reduce rezistența acestora & le poate face mai puțin rezistente la îndoire sau rupere. Utilizatorii trebuie să fie precauți la manipularea acelor chirurgicale pentru a evita leziunile accidentale. A arunca acele folosite în containere pentru obiecte ascuțite. Evitați expunerea prelungită la temperaturi ridicate. Nu utilizați după data expirării.

REACȚII ADVERSE
Efectele adverse asociate utilizării acestui dispozitiv includ dehiscenta plăgii, lipsa suportului adecvat al plăgii în zonele unde apare întinderea sau distensia, lipsa suportului adecvat la pacienții vârstnici, malnutriți sau debilitați, infecții, reacție inflamatorie acută minimă, iritație locală atunci când firele cutanate rămân în poziție mai mult de 7 zile, extruzii ale firului & întârzierea absorbției în țesuturile cu circulație sanguină slabă, formarea de calculi în tracturile urinare & biliare după contact prelungit cu soluții saline (urină, bilă), precum și iritație locală temporară la locul plăgii. Acele rupte pot duce la intervenții chirurgicale prelungite sau suplimentare sau la corpuri străine reziduale. Intepături accidentale cu ace chirurgicale contaminate pot duce la transmiterea agenților patogeni transmiti prin sânge.

STERILITATE
Firele **DAMACRYL 910** sunt sterilizate cu oxid de etilenă. Sterilitatea este menținută numai dacă pachetul este deschis în condiții sterile. Nu resterilizați. Nu utilizați dacă ambalajul este deschis sau deteriorat. Aruncați firele deschise & neutilizate.

DEPOZITARE
Păstrați departe de umiditate & căldură directă. Condițiile recomandate de depozitare sunt între 5-25 °C. Nu utilizați după data expirării.

Users should be familiar with surgical procedures and techniques involving absorbable sutures before employing **DAMACRYL 910** suture for wound closure, as risk of wound dehiscence may vary with the site of application and the suture material used. Users should consider the in vivo performance when selecting a suture. The use of this suture may be inappropriate in elderly, malnourished, debilitated patients, or in patients suffering from conditions which may delay wound healing. The use of supplemental non absorbable sutures should be considered by the surgeon in the closure of the sites which may undergo expansion, stretching or distention, or which may require additional support. As with any foreign body, prolonged contact of any suture with salt solutions, such as those found in the urinary or biliary tracts may result in calculus formation. As an absorbable suture, **DAMACRYL 910** suture may act transiently as a foreign body. Acceptable surgical practice should be followed for the management of contaminated or infected wounds. Discard opened packages and unused sutures. Do not re-use. Do not re-sterilize.

STERILITY
DAMACRYL 910 sutures are sterilized by ethylene oxide. Sterility is preserved only when opened under sterile conditions. Do not re-sterilize. Do not use if package is opened or damaged. Discard opened unused sutures.

STORAGE
Keep away from moisture and direct heat. Recommended storage condition is between 5-25°C. Don't use after expiry date.

SK
DAMACRYL 910
Poly (glycolide-co-lactid) / Polyglactin-910
Coated & Braided
Synthetic absorbable sterile surgical suture

DESCRIPTION
DAMACRYL 910 suture is synthetic absorbable sterile surgical suture. It is composed of copolymer prepared and synthesized from 90% glycolide and 10% L-lactide (derived from glycolic and lactic acids). These sutures are braided, dyed (violet) or undyed and coated with polycaprolactone and calcium stearate. **DAMACRYL 910** suture is non-antigenic, non-pyrogenic and elicits only a mild tissue reaction during the absorption process, and is completely absorbed in 54-70 days. The in vitro retention of strength is 65% in two weeks. **DAMACRYL 910** meets all requirements for absorbable synthetic sutures defined by the European Pharmacopoeia, EC Medical Device Regulation 2017/745/AT, and US Pharmacopoeia. Safety and clinical performance are detailed in GMD.SSCP.03

INDICATIONS
DAMACRYL 910 is indicated only for use in soft tissue (including ophthalmic surgery, gastrointestinal, obstetric and gynecological and urological surgery) approximation where mid term wound support (2-3 weeks) is required. **DAMACRYL 910** is not indicated for use in cardiovascular and neurological tissues.

CONTRAINDICATIONS
DAMACRYL 910 suture, being absorbable, should not be used where extended approximation of tissue is required.

WARNINGS
Users should be familiar with surgical procedures and techniques involving absorbable sutures before employing **DAMACRYL 910** suture for wound closure, as risk of wound dehiscence may vary with the site of application and the suture material used. Users
